DETAILED ACTION

Election/Restrictions

1. Applicant's election with traverse of group I (claims 2-4) in Paper No. 6 is acknowledged. However, since no arguments have been presented in support of the traversal, the election is considered to be made without traverse.

The requirement is still deemed proper and is therefore made FINAL.

Claims 1-4 read on the elected invention and will be examined on the merits as follows.

Claims 5-10 are withdrawn from consideration as being drawn to non-elected subject matter.

Claim Rejections - 35 USC § 112

2. A broad range or limitation together with a narrow range or limitation that falls within the broad range or limitation (in the same claim) is considered indefinite, since the resulting claim does not clearly set forth the metes and bounds of the patent protection desired. Note the explanation given by the Board of Patent Appeals and Interferences in *Ex parte Wu*, 10 USPQ2d 2031, 2033 (Bd. Pat. App. & Inter. 1989), as to where

Art Unit: 2872

broad language is followed by "such as" and then narrow language. The Board stated that this can render a claim indefinite by raising a question or doubt as to whether the feature introduced by such language is (a) merely exemplary of the remainder of the claim, and therefore not required, or (b) a required feature of the claims. Note also, for example, the decisions of *Ex parte Steigewald*, 131 USPQ 74 (Bd. App. 1961); *Ex parte Hall*, 83 USPQ 38 (Bd. App. 1948); and *Ex parte Hasche*, 86 USPQ 481 (Bd. App. 1949). In the present instance, claim 1 recites the broad recitation of object light, and the claim also recites reflection, fluorescence, which is the narrower statement of the range/limitation.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Art Unit: 2872

4. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Uhl.

Uhl teaches a scanning microscope including a switchable micro-mirror arrangement(32) and dispersive element (e.g. prisms 22,34 and 44) used for wavelength selection of light (note col. 7 lines 63-65). Uhl suggests use of the device with a laser source but does not explicitly teach such an arrangement. However, use of a known laser source with Uhl's device would have been obvious to the ordinarily skilled artisan at the time of invention as an art-recognized equivalent of the monochromatic means for illumination taught by Uhl.

With respect to claim 4, Uhl does not teach the dispersive means to be a grating. However, gratings are well known as dispersive elements and use thereof in Uhl's device would have been obvious to the ordinarily skilled artisan at the time of invention as a recognized functional equivalent of Uhl's prism dispersive element.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Wilson et al and Jovin et al teach micro-mirror devices in conjunction with microscope scanning systems.
